Markets began the week hopeful that the Iran war may be winding down. The administration’s rhetoric pointed to two to three weeks before the U.S. would exit Iran, indicating it would even consider leaving without a deal in place. Markets welcomed the news of some end to the crisis and hopes of de-escalation in the region, and stocks rallied sharply at the start of the week.

However, the president’s address on April 1st seemed to focus more on escalation of the military operations in Iran, rather than peace negotiations or exiting. There was little note of how the Strait of Hormuz may reopen to support global oil flows, but a notion that this may happen naturally once the war concludes. Perhaps the silver lining was that the two- to three-week period was still referenced, albeit more as the peak of military escalation, rather than a wind-down of operations.

In addition, reports emerged that Iran is drafting a protocol with Oman to monitor vessels crossing the Strait of Hormuz, and that Iran may be looking to set tolls to cross the strait. These reports helped provide a bit of stability in markets that are clearly looking for signals that global oil flows may resume over time.

By the end of last week, markets rebounded from the lows, and the S&P 500 index was positive for the week, after five straight weeks of negative returns. Overall, uncertainty and oil prices remain elevated heading into the long weekend, but glimmers of hope appear to be emerging that de-escalation and better oil flows may be on the horizon.

The U.S. economy also continues to show signs of resilience in recent economic datapoints. Last week, both U.S. retail sales and ISM manufacturing data came out above expectations. The retail-sales figure for February showed retail sales excluding autos advancing by 0.5% monthly, above forecasts of 0.3% and last month’s flat reading. This points to a U.S. consumer that continues to spend at a healthy rate, heading into the Iran crisis. Meanwhile, ISM manufacturing for March came in at 52.7, above forecasts of 52.3, and still indicating expansion in the U.S. manufacturing economy.

**The U.S. ISM Manufacturing Index remained in expansion territory for the third month in March (Index)**

In addition, we will get a full jobs report on April 3, but the ADP private-payrolls report for March released earlier in the week indicated an addition of 62,000 jobs, above forecasts of 40,000. And finally, the Atlanta Fed GDPNow forecast is pointing to a 1.6% economic growth rate in the first quarter, a rebound from last quarter’s weaker 0.7% growth.

Overall, the U.S. economy seems to be on pace for steady growth in the first quarter, with no meaningful signs of cracks, in our view, despite the geopolitical uncertainty that emerged in March. We will continue to monitor both inflation and economic growth metrics in the weeks and months ahead, but the early signals of resilience are a good reminder that the U.S. economy entered the current crisis from a position of relative strength.

**Sector Breakdown and Top Holdings**

The Fund is prepared for multiple outcomes and using market swings to add or remove exposures. Our biggest sectors: Materials (10.9%), Industrials (8.8%), Financials (8.3%), Energy (7.1%), and Real Estate (5.1%). I’ve added our Top 10 Equity Holdings below for this week.

**Top 10 Equity Holdings as of April 3, 2026**

1.	Chartwell Retirement – CSH.UN	REITS
2.	Base Carbon - BCBN	Financials
3.	Tenaz Energy - TNZ	Energy
4.	Canadian National Railway – CNR	Industrials
5.	Canadian Imperial Bank - CM	Financials
6.	Manulife - MFC	Financials
7.	Premium Brands - PBH	Consumer Staples
8.	Taiwan Semiconductor - TSM	Technology
9.	Bird Construction - BDT	Industrials
10.	Suncor Energy – SU	Energy

\*EGIF Top 10 Equity Holdings exposure: 8.8%

The Exemplar Growth & Income Series FD was +2.21% last week and is +5.69% year to date.

Last week was the 1st week in 6 weeks that saw a gain in the Nasdaq with a week over week rise of about 4%. The rebound in sentiment could be due to investors believing that an end of the Third Gulf War is close with many countries floating a “45-day ceasefire proposal” and the Strait of Hormuz seeing more ships flow through “from friendlier countries” uninterrupted. Some of the performance can also be credited to short covering coming out the previous week which saw large declines across the Indices.

However, there continues to be public escalation of the war as Iran declines the 15-point proposal from the U.S. on the keynote that they will not be opening the Strait of Hormuz. The market saw negative correlations come down between oil and the S&P 500 with the S&P 500 performing with WTI oil remaining above \$100. The end of the week saw a mixed jobs report with a strong March employment (+178K vs +65k consensus), while February was revised downwards to -133K from -92K, with the lowest labor force participation rate in the U.S. since 2021 at 61.9%. These signals added to our Stagflationary conviction as the market factors in higher oil prices for longer.

We continue to remain on the cautious side as we navigate through the uncertainty of headline risk. Consequently, we remain positioned with reduced equity exposure, having increased our allocations to both commodities and fixed income. Within Fixed Income, we have reduced our exposure to Credit, especially High Yield, with increasing exposure to rate sensitive government bonds.

Exemplar Global Growth & Income Asset Allocation – March 27, 2026

**ASSET ALLOCATION**

**Top 10 Equity Holdings as of April 3, 2026**

- |                              |                        |
|------------------------------|------------------------|
| 1. Amazon – AMZN             | Consumer Discretionary |
| 2. Nvidia – NVDA             | Technology             |
| 3. Alphabet - GOOG           | Communication Services |

Commissions, trailing commissions, management and performance fees and expenses all may be associated with mutual fund and exchange-traded fund (ETF) investments. Please read the prospectus before investing. The indicated rates of return are the historical annual compound total returns net of fees and expenses payable by the fund (except for figures of one year or less, which are simple total returns) including changes in security value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any securityholder that would have reduced returns. Mutual funds and ETFs are not guaranteed, their values change frequently and past performance may not be repeated. You will usually pay brokerage fees to your dealer if you purchase or sell securities of an ETF on recognized Canadian exchanges. If the securities are purchased or sold on these Canadian exchanges, investors may pay more than the current net asset value when buying securities of the ETF and may receive less than the current net asset value when selling them.

The rates of return are used only to illustrate the effects of the compound growth rate and are not intended to reflect future values or returns on investment in an investment fund.
